

The **Tons of Humanity** chart, which was created by Dr. Paul MacCready, shows EXACTLY the fundamental cause of the primary pressure on Earth's Wild Life.

- Each TON of humanity exacts its toll in various ways and in various environs, but its primary effect is actually its most basic property, MASS.
 - √The term "Stock" refers to Humanity's cattle, horses, dogs, cats, etc.
 - √These two competing curves show that nature's Wild Life had a maximum tonnage in recent memory and that this value has drastically decreased under the impact of multiplying Humanity since the start of the 20th century.
 - √ History shows numerous changes in mankind's hightened technical progress and subsequent expansion, e.g. antibiotics and high-temp welding.
- "Each time we impact Wild Life it's ability to respond is reduced." Dr. Ed Wilson
 - ✓ It is proposed that the first way to benefit Wild Life is to allow more acreage for their needs.
 - ✓ Architectural and urban planning increase our population densities healthfully to permit richer local environments.
 - ✓ Agricultural approach preserve 10-15% free acerage for Wild Life habitat.
 - ✓ Minimize consumptive stock and predatory pets.
